

MA Mike Afurong

ADDIE in Action: Planning Effective Learning Solutions for Real Problems

Ever wondered how to turn a real workplace problem into a practical learning solution? In this friendly, hands-on course, you'll step into the shoes of an instructional designer tackling challenges at a bustling café. Discover how to use the ADDIE model—not as a rigid formula, but as a flexible guide—to analyze needs, design engaging activities, develop meaningful materials, and evaluate success. By course end, you'll be ready to plan training that truly makes a difference, and know when training alone isn't the answer.

- Start with the Problem: Introducing ADDIE and Workplace Needs
- Analyze: Investigating Performance Gaps and Root Causes
- Design: Setting Clear Objectives and Planning Learning Experiences
- Develop: Creating and Testing Learning Materials
- Implement: Launching and Supporting the Learning Solution

Powered by Articulate

- Evaluate: Measuring Success and Driving Continuous Improvement
- Wrap-Up and Scenario-Based Assessment
- Quiz

Lesson 1 of 8

Start with the Problem: Introducing ADDIE and Workplace Needs

MA Mike Afurong

Powered by Articulate

Why Start with the Problem?

Have you ever been asked to create a training program because something isn't working at work? It's tempting to jump right into building a solution, but the real key

is understanding what's truly causing the issue. Before we start designing anything, we need to make sure we're solving the right problem.

In this lesson, you'll explore key concepts and skills essential for effective workplace learning and development.

1. Recognize and define workplace problems.
2. Distinguish between a manager's training request and the actual need.
3. Understand the ADDIE model and its phases.
4. See how ADDIE helps align solutions to real needs.

Powered by Articulate

Meet Bright Cup Café

Welcome to Bright Cup Café! This friendly neighborhood spot is known for its great coffee and welcoming team. Lately, though, the café has been facing a challenge: new employees are making mistakes when entering orders, which leads to unhappy customers and extra work for the staff. The manager thinks training might be the answer—but is it really?

"Our new employees keep making order mistakes. Can you build a course?" That's the request from the manager at Bright Cup Café. What should you do next? Should you start designing slides, schedule a training session, or take a closer look at what's really happening?

Powered by Articulate

What should you do first when asked to build a training course for a workplace problem?

- Start creating slides
- Schedule training sessions
- Investigate the problem

SUBMIT

Powered by Articulate

Powered by Articulate

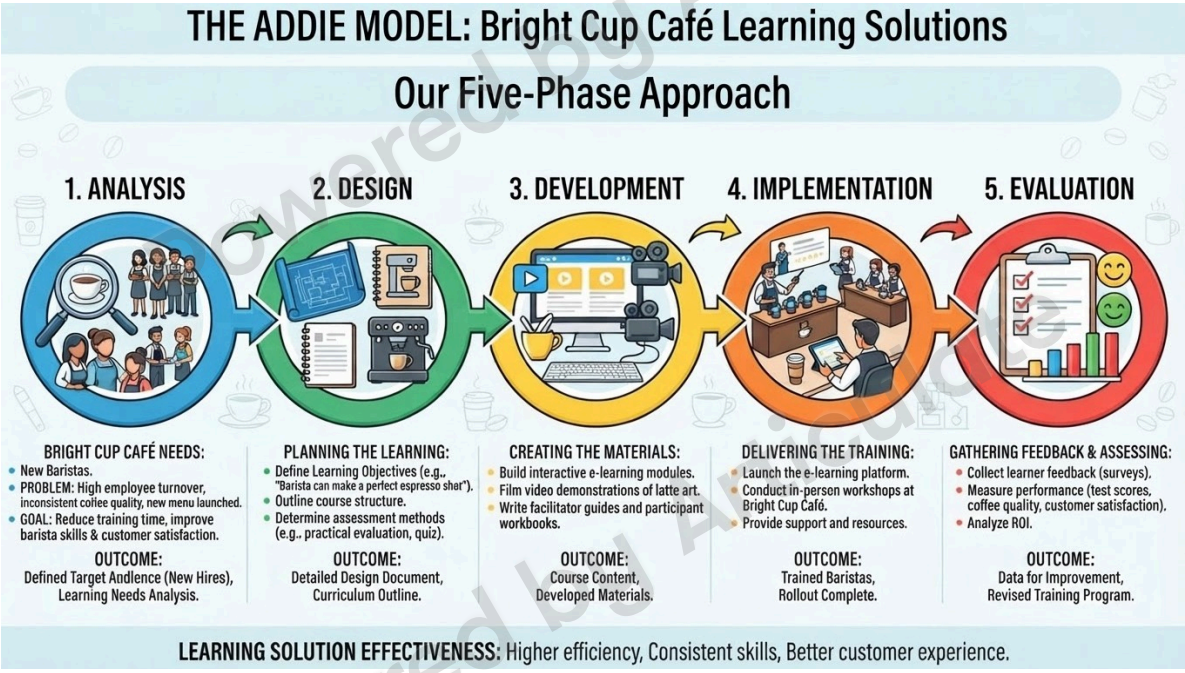

Jumping straight to solutions can miss the real problem. The best learning solutions start with understanding what's really going on.

Introducing the ADDIE Model

Instructional designers use a flexible framework called ADDIE to guide their work. ADDIE stands for Analyze, Design, Develop, Implement, and Evaluate. This model helps ensure that learning solutions are tailored to real needs, not just quick fixes.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Introduction to ADDIE

The ADDIE model is a step-by-step process for creating effective learning solutions. Let's walk through each phase, using our Bright Cup Café scenario as an example.

Powered by Articulate

Step 1

Analyze

Find out what's really causing the problem. At Bright Cup, this means looking into why order mistakes are happening.

Analyze Phase Image

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 2

Design

Plan the learning experience. Decide what employees need to learn and how best to teach it.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 3

Develop

Create the actual training materials—like guides, checklists, or practice activities.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 4

Implement

Roll out the training to employees and support them as they learn.

Implement Phase Image

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 5

Evaluate

Check if the training worked and see what could be improved. Did order mistakes go down?

Powered by Articulate
Powered by Articulate
Powered by Articulate

Summary

ADDIE helps you build learning that solves real problems, step by step.

Powered by Articulate

ADDIE Phases Flashcards

Let’s get familiar with each ADDIE phase. Review each flashcard to see the phase, its purpose, and a café example.

Powered by Articulate

Analyze

Discover why order mistakes happen at Bright Cup.

Powered by Articulate

Design

Plan what employees need to learn and how to teach it.

Develop

Create training materials, like checklists or practice guides.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Implement	Deliver the training and support staff as they learn.
Evaluate	Check if the training reduced mistakes and what could be improved.

Powered by Articulate
Powered by Articulate
Powered by Articulate

ADDIE isn't a strict, one-way street. Sometimes, as you move through the steps, you'll discover new information or get feedback that sends you back to an earlier phase. That's normal! The process is meant to be flexible and adaptable, just like real workplace challenges.

ADDIE: A Flexible, Iterative Process

Think of ADDIE as a cycle, not a straight line. Feedback from learners, managers, or results can send you back to analyze, redesign, or improve your solution at any time. This keeps your training relevant and effective.

Complete the content above before moving on.

To wrap up: The best learning solutions start by understanding the real problem, not just responding to requests. The ADDIE model is your flexible guide for designing training that works. In the next lesson, you'll dive deeper into how to investigate workplace problems at Bright Cup Café and uncover what's really going on.

Powered by Articulate

Lesson 2 of 8

Analyze: Investigating Performance Gaps and Root Causes

MA Mike Afurong

Powered by Articulate

Why Dig Deeper Before Designing Training?

When something goes wrong at work, it's tempting to jump straight into creating a training course. But is training always the answer? At Bright Cup Café, for example, when mistakes happen, it's important to ask: Is it really a training issue—or could something else be causing the problem? Understanding the true cause is the first step to finding the right solution.

In this lesson, you will explore essential steps to effectively assess and address learning needs within your organization.

1. Gather the right information
2. Understand your learners' needs
3. Spot training vs. non-training issues
4. Write a clear needs statement

Let's revisit the Bright Cup scenario. The manager believes new hires need training because they're making mistakes when entering orders. But as an instructional designer, your job is to dig deeper: What's really causing these errors? Is it a lack of knowledge, a confusing system, or something else entirely?

What Should You Investigate?

Effective analysis means asking the right questions—not just about the problem itself, but also about the people involved, their environment, and the resources they use. By exploring these areas, you'll uncover what's truly behind the performance gap.

Powered by Articulate

Key Questions to Investigate at Bright Cup

Before designing a training solution, it's important to thoroughly investigate the situation. Click each question below to explore what you should consider at Bright Cup.

What's the performance problem?

What mistakes are happening, and how often? At Bright Cup, are orders being entered incorrectly every day, or just once in a while?

Knowing the frequency and type of errors helps you understand the scope of the issue.

Who are the learners?

What do new employees already know about the register and order process? Are they familiar with similar systems, or is this their first café job?

Understanding your learners' backgrounds helps you tailor your investigation and any future solutions.

What's the work environment like?

Are there distractions, equipment issues, or confusing labels at the register? Is the café especially busy during certain hours, making it harder to focus?

The environment can play a big role in how well employees perform.

Powered by Articulate

What resources and constraints exist?

Do employees have time to practice using the register? Is there support from managers or experienced staff?

Resources and constraints can affect whether training will be effective or if other changes are needed.

Is training the right solution?

Could changes to the register or workflow help more than training? For example, would clearer labels or a simpler process reduce mistakes?

Sometimes, the best fix isn't training at all, but an operational change.

Powered by Articulate

Gathering Clues at Bright Cup

Imagine you spend a morning shadowing employees, reviewing order tickets, and chatting with the team. You notice two main issues: new staff haven't had enough practice entering orders, and some register buttons are labeled in a confusing way. These clues help you figure out what's really causing the mistakes.

Not every workplace problem can be fixed by training alone. Sometimes, changes to tools or processes are needed too.

Sorting Bright Cup Issues: Training vs. Operational Change

Sort the following Bright Cup workplace issues into the correct categories: those that can be addressed by training and those that require an operational change.

Can be addressed by training

Powered by Articulate
Powered by Articulate
Powered by Articulate

As you can see, some problems—like lack of practice or knowledge—are training needs. Others—like confusing labels or technical glitches—require operational solutions. Good analysis means spotting the difference so you can recommend the right fix.

Writing a Needs Statement

A needs statement sums up what’s causing the performance gap and what kind of solution is needed. It’s a clear, simple way to guide your next steps and make sure everyone is on the same page.

Review: Elements of a Good Needs Statement

Let's review the key components that make up an effective needs statement. Each part helps clarify the problem and what is required to address it.

Describe the performance gap	New staff at Bright Cup often enter orders incorrectly.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Identify what's causing it

Some mistakes come from lack of practice; others from confusing register labels.

State what's needed

Employees need more order-entry practice (training), and register labels need to be clearer (operational change).

Powered by Articulate
Powered by Articulate
Powered by Articulate

Bright Cup's Needs Statement

Here's what you'd write: 'Bright Cup new employees need practice entering orders accurately. Some order mistakes come from confusing register labels, which should be updated.' This statement guides your next steps in the ADDIE process.

Powered by Articulate

Which of the following is the BEST needs statement for Bright Cup?

- Employees make mistakes, so we need training.
- Order errors are due to lack of practice and unclear labels. Training and register updates are both needed.

The register is old and should be replaced.

SUBMIT

Continue

You've learned how to investigate performance problems, distinguish training needs from operational issues, and write a clear needs statement. Next, you'll use your analysis to design objectives and learning activities that really fit Bright Cup's needs.

Lesson 3 of 8

Design: Setting Clear Objectives and Planning Learning Experiences

MA Mike Afurong

Powered by Articulate

From Needs to Plans: Designing for Real Results

Designing a great learning experience is like crafting the perfect recipe at your favorite café. It's not just about knowing what's missing—it's about planning every step so the end result is truly satisfying. Clear objectives and thoughtful planning are the secret ingredients that turn a workplace need into real, lasting change.

In this lesson, you will discover essential strategies for designing effective learning experiences. The focus will be on transforming needs into actionable objectives, planning meaningful assessments, and ensuring all elements of your lesson are aligned for the best results.

1. Turn needs into clear, measurable learning objectives.
2. Plan assessments that check real understanding.
3. Choose activities that help learners practice what matters.
4. Align objectives, activities, and assessments for maximum impact.
5. Build a simple learning plan for Bright Cup.

At Bright Cup, you discovered that new hires need more order-entry practice. Now, it's time to design a learning experience that targets this need. How do you make sure your training truly helps employees succeed?

Powered by Articulate

What Makes a Good Learning Objective?

Strong learning objectives are the foundation of any effective training plan. They're specific, measurable, and focused on what learners should actually be able to do after

training—not just what they should know. Clear objectives make it easy to plan activities and assessments that really matter.

Reviewing Effective Objectives

Let's review the key characteristics that make learning objectives effective. Each characteristic ensures objectives are clear, actionable, and assessable.

Specific

States exactly what the learner will do. E.g., ‘Enter customer orders’.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Measurable	Can you check if the learner did it right? E.g., ‘Enter five orders accurately’.
Action-oriented	Focuses on doing, not just knowing. E.g., ‘Use the register to enter orders’.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Sample Objective at Bright Cup

Here’s an example: ‘Given five sample customer orders and a practice register, new employees will enter all five orders accurately.’ This objective is clear, measurable, and matches the real job need.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Spotting the Difference Between Objectives

Understanding the difference between vague and measurable objectives is crucial for effective training. Let's compare two examples to see how they differ.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 1

Vague Objective

Employees will understand how to use the register.

This objective is too general. It doesn't say what employees should actually do or how you'll know if they can do it.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Step 2

Measurable Objective

Given five sample customer orders and a practice register, new employees will enter all five orders accurately.

This objective is specific and measurable. You can clearly see if someone has achieved it—and it matches the real work at Bright Cup.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Summary: Why Measurable Objectives Matter

Measurable objectives provide clear expectations and make it easy to assess whether employees have mastered the required skills. Always aim for objectives that specify what learners will do and how success will be measured.

Powered by Articulate

Which objective is best for training new Bright Cup employees to enter orders?

- ○ Employees will know about the register.
- ○ Employees will enter sample orders accurately using the register.
- ○ Employees will be familiar with the café.
- ○ Employees will watch a video about customer service.

SUBMIT

Aligning Assessments and Activities

Effective training connects objectives, activities, and assessments so everything works together. If your objective is order accuracy, your activities and assessments should give learners a chance to practice and prove this skill. Alignment ensures every part of your plan supports real results.

Powered by Articulate

How to Align Your Plan at Bright Cup

Click each step to see how to align your plan at Bright Cup:

Objective

Enter five sample orders accurately.

This is the goal—what learners should be able to do by the end of training.

Practice activity

Use a practice register to enter sample orders with feedback.

This activity lets learners try the real task in a safe environment, with guidance to help them improve.

Assessment

Complete a final check: Enter five orders without help. Score: 5/5 = ready!

This assessment measures whether learners can perform the skill on their own, showing they're ready for the job.

Powered by Articulate

A Simple Learning Plan for Bright Cup

When objectives, activities, and assessments all fit together, learners know what's expected and can practice until they're ready for the real thing.

Powered by Articulate

Which activity best supports the objective: 'Enter five sample orders accurately'?

- ◯ Watch a video about the café's history.

- ◯ Practice entering orders on the register with feedback.
- ◯ Read the employee handbook.
- ◯ Listen to a talk about customer service.

SUBMIT

The best learning experiences are built backwards from clear objectives—so every activity and assessment has a purpose.

Continue

You've learned how to set clear objectives, align activities and assessments, and build a focused learning plan—just like a recipe for success at Bright Cup. Next, you'll discover how to actually build and test your training materials to make sure they work in the real world.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Lesson 4 of 8

Develop: Creating and Testing Learning Materials

MA Mike Afurong

Powered by Articulate

Bringing Your Learning Plan to Life

Once you have a solid learning plan, it's time to roll up your sleeves and turn your ideas into real materials that help people learn and succeed on the job. Just like

watching a café recipe transform from a list of ingredients into a delicious treat, this phase is about bringing your training to life—step by step.

In this lesson, you will discover the essential steps for developing effective learning materials and ensuring your training is impactful and accessible.

1. Create learning materials that match your plan.
2. Build demonstrations, practice activities, job aids, and assessments.
3. Test your materials with real users.
4. Use feedback to make improvements.
5. Ensure your training is clear, accurate, and accessible.

You've set clear objectives and a learning plan for new employees at Bright Cup. Now, it's time to build the actual training—so new hires can practice entering orders and get the feedback they need. This is where your planning turns into something real and useful for the team.

What Do You Need to Build?

Effective training isn't just a presentation or a handout. It's a mix of demonstrations, practice activities, job aids, and assessments—each with a unique role in helping people learn. Let's look at what you might need to create for Bright Cup's new employee training.

Powered by Articulate

Types of Training Materials for Bright Cup

Discover the different types of training materials you can create to help new hires at Bright Cup learn how to enter orders efficiently.

Powered by Articulate

What is a Demonstration in the context of Bright Cup training?

A Demonstration shows how to enter an order step-by-step, allowing new hires to observe the correct process.

Powered by Articulate

What is a Practice Activity for new hires at Bright Cup?

A Practice Activity lets new hires try entering sample orders themselves, with feedback provided to help them improve.

Powered by Articulate

What is a Job Aid in Bright Cup training materials?

A Job Aid is a quick-reference card that shows the steps for using the register, helping employees remember the process.

What is the purpose of an Assessment in Bright Cup training?

An Assessment is a final check to see if the employee can enter five orders correctly, ensuring they have mastered the skill.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Building Materials for Bright Cup

Imagine designing a simple step-by-step video, a practice register activity, a handy job aid, and a quick assessment—each tailored to the real needs you discovered. These materials help new employees learn by seeing, doing, and checking their progress, just like in a real café shift.

How Materials Are Created and Tested

Click each step to see how materials are created and tested:

Build

Draft your demo, practice, job aid, and assessment based on the learning plan. Start simple—focus on what learners really need to do their jobs well.

Powered by Articulate

Prototype

Assemble a basic, working version of your course or activity. This doesn't have to be fancy—just enough to test if it works.

Pilot Test

Invite a sample learner or team member to try out your prototype. Watch how they use it and where they get stuck.

Gather Feedback

Ask what worked, what was confusing, and what could be better. Listen carefully—real users spot things you might miss.

Revise

Use the feedback to improve clarity, accuracy, and usability. Repeat the process if needed until your materials are ready for everyone.

Testing with real users—before launch—is your best chance to catch confusion or mistakes.

Powered by Articulate

Why is it important to test your prototype with real users at Bright Cup?

- ◯ To make sure everything looks nice
- ◯ To find out if the instructions and activities actually work for real employees
- ◯ Because testing is required by ADDIE
- ◯ To impress the manager

SUBMIT

Powered by Articulate

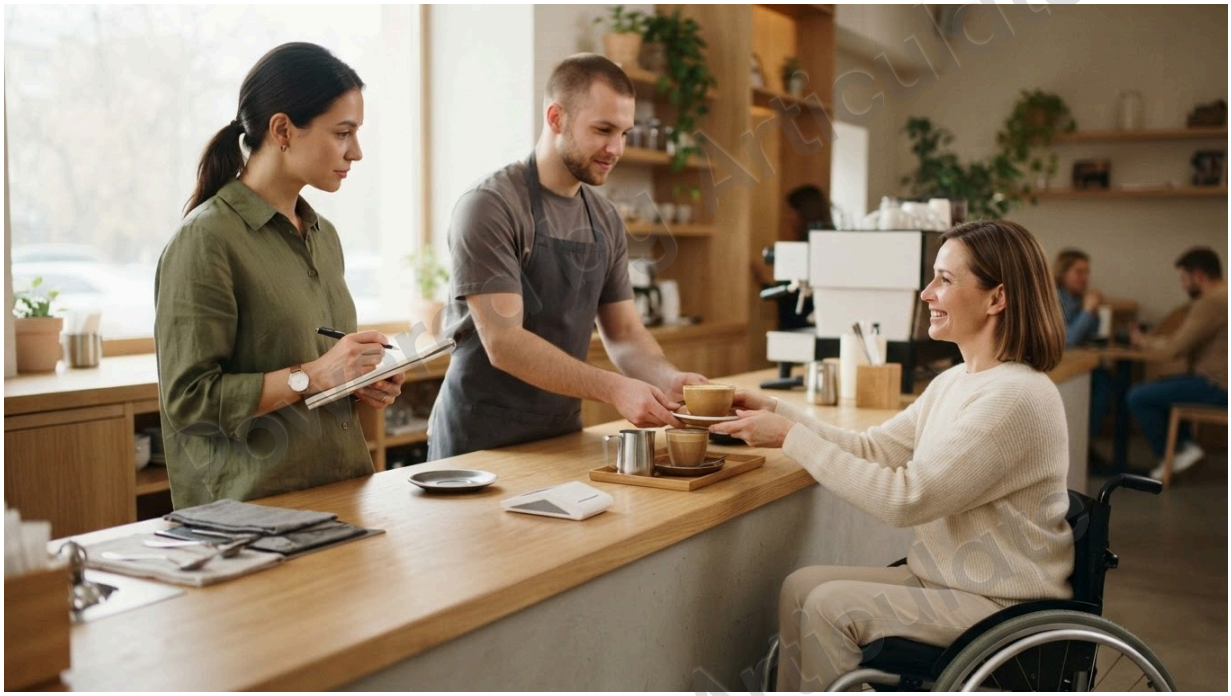

Check for Quality: Is Your Training Ready?

Before you launch your training, it's important to check that your materials are accurate, clear, accessible, and easy to use. Quality assurance helps make sure everyone can learn and succeed—no matter their background or abilities.

Use this checklist to ensure your training materials are effective, accessible, and aligned with your learning objectives.

1. Are instructions and content accurate?
2. Is everything clear and easy to follow?
3. Can all learners access and use the materials (including those with disabilities)?
4. Are practice activities realistic and helpful?
5. Are assessments fair and matched to objectives?

Powered by Articulate

Powered by Articulate

Quality Counts at Bright Cup

Before sharing your training with all employees, use your checklist—just like a barista checks ingredients before making a drink. Quality makes all the difference!

Powered by Articulate

A pilot learner says the practice activity instructions are confusing. What should you do?

- Ignore the feedback and launch anyway
- Clarify the instructions and test again
- Remove the activity from the training
- Tell the learner to try harder

SUBMIT

Great training is built through feedback and revision—not just the first draft.

Continue

You've learned how to create and test learning materials, use feedback for improvement, and ensure quality at every step—just like perfecting a new recipe at

Powered by Articulate

Lesson 5 of 8

Implement: Launching and Supporting the Learning Solution

MA Mike Afurong

Powered by Articulate

From Plan to Practice: Launching Your Learning Solution

Even the best training plan won't make an impact unless it's rolled out smoothly. Careful implementation helps everyone—learners, managers, and facilitators—get the most from a new course. A successful launch sets the stage for real learning and lasting results.

This lesson will guide you through the essential steps to ensure a successful training experience for all participants. You will learn how to effectively prepare, communicate, and support your team throughout the training process.

1. Prepare everyone for training
2. Test course access and logistics
3. Communicate expectations and schedule practice
4. Support participants after launch
5. Troubleshoot common implementation problems

You've built and tested a training course for new employees at Bright Cup. Now, it's time to launch! But a successful rollout means more than just sharing a link—it's about making sure everyone is ready and supported. Implementation is where your planning meets real people, real schedules, and real café challenges.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Who Needs to Be Ready?

Successful implementation depends on more than just the training materials. Learners, managers, and facilitators all play important roles in making sure the launch goes smoothly. Each group needs to know what to expect and how to contribute to a great start.

Key Players for a Successful Launch at Bright Cup

Meet the key players for a successful launch at Bright Cup:

Learners

New hires who need to complete the training and practice order entry.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Managers	Help schedule practice time and encourage participation.
Facilitators/Support	Answer questions and solve technical problems.

Powered by Articulate
Powered by Articulate
Powered by Articulate

How to Prepare for Launch at Bright Cup

Follow these steps to ensure a smooth rollout of your online training program for new hires at Bright Cup.

Powered by Articulate

Test Course Access

Make sure the online training works on café computers and devices. Test logins, links, and any interactive features before launch day.

This helps avoid last-minute surprises and ensures everyone can get started without technical hiccups.

Communicate Expectations

Tell new hires why the training matters and what they'll need to do. Share clear instructions on how to access the course and what's expected for completion.

Setting expectations early helps learners feel confident and ready to participate.

Schedule Practice Time

Block time for new employees to complete training and practice with the register. Make sure practice sessions fit into the café's busy schedule.

Dedicated time shows that learning is a priority and supports better results.

Prepare Managers

Share tips with managers on how to support learners and answer questions. Provide a quick guide or checklist so they know how to help.

Managers are key allies in encouraging participation and troubleshooting small issues.

Provide Help

Set up a way for employees to get help if they run into issues. This could be a support contact, a help desk, or a simple FAQ.

Easy access to help keeps learners moving forward and reduces frustration.

Powered by Articulate

Launch Day at Bright Cup

On launch day, everyone knows what to do—thanks to clear communication, tested access, and support on standby. A smooth start helps learners focus on building their skills, not on fixing problems.

A great course can fail if people can't access it or don't know what's expected—so preparation is key.

Troubleshooting: What If Something Goes Wrong?

Even with careful planning, issues can pop up—like access problems, forgotten passwords, or confusing instructions. The key is to anticipate common challenges and respond quickly so learners stay on track and motivated.

On launch day, several new employees can't log in to the course. What should you do first?

- ◯ Tell them to try again later.
- ◯ Check if there's a technical issue and provide support.
- ◯ Ignore the problem and continue.

Powered by Articulate

Ask them to use someone else's account.

SUBMIT

Use this checklist to ensure your course launch goes smoothly and all participants have a positive experience.

1. Double-check course access on all devices.
2. Share clear instructions with learners and managers.
3. Provide contact info for support.
4. Encourage managers to check in with new hires.
5. Monitor for issues and respond quickly.

Powered by Articulate
Powered by Articulate
Powered by Articulate

Support Makes Success Possible

At Bright Cup, support isn't an afterthought—it's built in. When learners feel supported, they're more likely to complete training and succeed on the job.

Powered by Articulate

What's the best way to support a manager who isn't sure how to help new hires?

- Send them a detailed guide with talking points and tips.
- Tell them to figure it out on their own.
- Remove them from the process.

Powered by Articulate

Ask another manager to do it instead.

SUBMIT

Successful implementation means everyone feels ready, supported, and able to learn—before, during, and after launch.

Continue

You've learned how to launch a learning solution, prepare everyone for success, and provide strong support at every step—just like a busy morning at Bright Cup. Next, you'll discover how to evaluate your training and measure real impact, so you can keep improving and make a real difference.

Powered by Articulate

Lesson 6 of 8

Evaluate: Measuring Success and Driving Continuous Improvement

MA Mike Afurong

Powered by Articulate

How Do You Know Training Worked?

Imagine Bright Cup Café tries a new recipe. They don't just hope customers like it—they check sales, ask for feedback, and watch for repeat orders. In the same way,

evaluating training means checking if it actually made a difference. Did employees learn what they needed? Are mistakes going down? Evaluation helps you see what's working, what isn't, and what could be even better.

This lesson will guide you through essential skills for evaluating training effectiveness and making improvements based on real feedback and results.

1. Use different types of evaluation to assess training from multiple perspectives.
2. Collect and interpret feedback to understand participant experiences and learning outcomes.
3. Recognize the limits of satisfaction surveys and learn why they may not tell the whole story.
4. Measure real workplace impact to see how training translates into job performance.
5. Use results to make training even better by applying insights to future programs.

You've launched your new training at Bright Cup, and employees have started using it. Now, the manager wants to know: Did it actually help reduce order mistakes? This is where evaluation comes in—helping you answer the big question, "Did our solution work?"

Powered by Articulate
Powered by Articulate
Powered by Articulate

What Is Evaluation in ADDIE?

Evaluation is the process of gathering evidence about what's working and what needs improvement—before, during, and after training. It's not just a final step, but an ongoing way to make sure your learning solution is truly effective.

Types of Evaluation in Training

Understanding the two main types of evaluation helps ensure training programs are effective and meet their goals. Explore the differences between formative and summative evaluation below.

Formative Evaluation

Check and improve training while it's being developed (e.g., pilot testing at Bright Cup).

Powered by Articulate
Powered by Articulate
Powered by Articulate

Summative Evaluation	Assess results after training is launched (e.g., tracking order accuracy after employees complete training).

Powered by Articulate

Powered by Articulate

Powered by Articulate

Gathering Evidence at Bright Cup

At Bright Cup, you collect feedback from learners, observe them using the register, and check if order mistakes have decreased. These clues help you measure the training's impact and decide what to improve next.

What Can You Measure?

There are many ways to check if training worked. Some measures focus on how learners feel, others on what they can do, and some on real business results. Looking at all these angles gives you a complete picture of success.

What Can You Measure at Bright Cup?

Click through the tabs to explore different ways to measure the impact of training at Bright Cup. Each approach gives you unique insights into how well your training is working.

LEARNER FEEDBACK | DEMONSTRATED LEARNING | ON-THE-JOB PERFORMANCE | OPERATIONAL RESULTS

After training, you can ask employees how they felt about the course. Did they find it helpful, clear, and engaging? This feedback can highlight what learners liked and where they struggled.

While positive comments are encouraging, remember that satisfaction alone doesn't prove learning happened. It's just one piece of the puzzle.

LEARNER FEEDBACK | DEMONSTRATED LEARNING | ON-THE-JOB PERFORMANCE | OPERATIONAL RESULTS

To see if employees really learned, have them show their skills in practice. For example, ask new hires to enter sample orders on the register and check their accuracy.

Powered by Articulate

This helps you confirm that learners can actually do what the training aimed to teach—not just talk about it.

LEARNER FEEDBACK	DEMONSTRATED LEARNING	ON-THE-JOB PERFORMANCE	OPERATIONAL RESULTS

Check if employees are making fewer mistakes during real shifts. Compare order accuracy before and after training to see if there's real improvement.

Tracking performance on the job shows whether training results are sticking when it matters most.

LEARNER FEEDBACK	DEMONSTRATED LEARNING	ON-THE-JOB PERFORMANCE	OPERATIONAL RESULTS

Look at bigger business outcomes, like customer satisfaction or the number of complaints. Has the café received fewer complaints about wrong orders since training?

These results show if training is making a difference for the business, not just for individual employees.

Satisfaction is important—but just because learners liked the course doesn't mean they're making fewer mistakes.

Employees at Bright Cup say they enjoyed the training. Does this prove the training was effective?

Powered by Articulate

- ◯ Yes, because satisfaction means success.
- ◯ No, because you need to check if order accuracy improved.
- ◯ Only if the manager is also satisfied.
- ◯ Yes, if everyone finished the course.

SUBMIT

Powered by Articulate

Putting It All Together: Create an Evaluation Plan

A good evaluation plan spells out what you'll measure, how you'll measure it, and when. Planning ahead makes it easier to collect the right data and use it to improve your training.

How to Plan Evaluation at Bright Cup

Click each step to learn how to effectively plan and carry out evaluation for training at Bright Cup. Each step ensures your evaluation is meaningful and leads to real improvements.

What will you measure?

Order accuracy before and after training. This helps you see if mistakes are actually going down.

Choosing the right focus ensures you're tracking what matters most for the café.

How will you measure it?

Compare order tickets, observe practice sessions, and collect feedback from employees and managers.

Using a mix of methods gives you a fuller picture of what's working and what isn't.

When will you measure?

During pilot testing (formative) and after full rollout (summative).

Checking at different times helps you catch issues early and see long-term results.

Who will review results?

The instructional designer and café manager will look at the data together.

Collaborating ensures everyone understands what the results mean and what to do next.

What will you do with the results?

Use findings to improve training or suggest register updates.

Powered by Articulate

Evaluation isn't just about collecting data—it's about making real improvements based on what you learn.

Powered by Articulate

From Data to Decisions

By comparing order accuracy before and after training—and listening to feedback—you can see what changed and decide what to improve next. This helps you make smart choices about future training and café operations.

Evaluation isn't just the last step—it's the key to making learning solutions better and more effective over time.

Order accuracy improved after training, but some mistakes remain because register labels are still confusing. What should you do?

- Celebrate and ignore the remaining mistakes.
- Suggest updating the register labels and adjust training as needed.
- Restart the training from scratch.
- Only collect more feedback from learners.

SUBMIT

Powered by Articulate

Continue

You've learned how to measure success, interpret feedback, and use results to keep improving—just like Bright Cup keeps perfecting its service. Next, you'll wrap up the course with a scenario-based assessment and a handy summary of everything you've learned.

Lesson 7 of 8

Wrap-Up and Scenario-Based Assessment

Putting It All Together: ADDIE in Action

After exploring each phase of ADDIE at Bright Cup, it's time to see how everything fits together—and check your understanding with a real-world challenge. This is your chance to bring all your new skills together and see how they work in practice.

In this final lesson, you will have the opportunity to put your learning into practice and prepare for real-world application of the ADDIE model.

1. Apply ADDIE to a realistic workplace scenario.
2. Test your knowledge with scenario-based questions.
3. Review the key questions and outputs for each phase of the ADDIE model.
4. Reflect on how you can use ADDIE in your own professional context.
5. Download a summary of the lesson for future reference.

You've investigated real problems, designed solutions, built and launched training, and measured results at Bright Cup. Now, let's see how you'd respond to similar challenges—step by step, just like a real instructional designer.

Scenario Challenge: ADDIE in Practice

You'll answer five scenario-based questions—one for each phase of ADDIE—using what you've learned to tackle real workplace challenges at Bright Cup. Think carefully about each step and apply your knowledge to solve practical problems.

Bright Cup's manager asks for training to reduce order entry mistakes. What should you do first?

- Start building training slides.
- Investigate the causes of the mistakes.
- Schedule employees for the next training session.
- Create a feedback survey for employees.

SUBMIT

Which learning objective is best for helping new hires practice order entry?

- Employees will understand the register.
- Employees will enter five sample orders accurately using

Powered by Articulate

the register.

- Employees will be familiar with the menu.
- Employees will watch a video about order entry.

SUBMIT

While pilot testing the training, a new employee finds the practice instructions confusing. What should you do?

- Ignore the feedback and launch as planned.
- Revise the instructions and test again.
- Remove the practice activity.
- Ask the manager to explain the instructions instead.

SUBMIT

Powered by Articulate

On launch day, employees can’t access the training. What’s your first step?

- Ask them to try again later.
- Quickly check for technical issues and provide support.
- Cancel the training altogether.
- Tell employees to read the handbook instead.

SUBMIT

After training, employees say they enjoyed the course. Does this mean order accuracy improved?

- Yes, satisfaction proves effectiveness.
- No, you need to check actual order accuracy before and after training.
- Only if the manager is satisfied too.

Powered by Articulate

Yes, because positive feedback is all that matters.

ADDIE at a Glance: Key Questions and Outputs

Here's a handy summary of each phase—what to ask, and what to produce—to guide your future projects. The ADDIE model consists of five phases: Analyze, Design,

Powered by Articulate

Develop, Implement, and Evaluate. Each phase has its own focus, key questions, and expected outputs, helping you systematically create effective learning experiences.

Use this quick-reference guide to help you navigate each phase of your next project. Each step includes a key question to consider and the expected output.

1. **Analyze:** Key question: What's the real problem? Output: Needs statement.
2. **Design:** Key question: What should learners be able to do? Output: Learning plan with objectives, activities, and assessments.
3. **Develop:** Key question: How will we build and test materials? Output: Tested training prototype.
4. **Implement:** Key question: How will we launch and support the training? Output: Launch and support plan.
5. **Evaluate:** Key question: Did it work? What can we improve? Output: Evaluation plan and recommendations.

ADDIE is your flexible guide—use it to solve real problems, measure success, and keep improving with feedback.

Your Turn: Reflect and Apply

Think of a learning problem from your own setting—school, work, or daily life. Before deciding to build a course, consider what you would investigate. For example, you might identify the root cause of the problem, determine who the learners are, and assess what resources are already available. Reflect on how you could use the ADDIE model to guide your next steps. Which phase would you start with, and what questions would you ask during each phase to ensure your solution is effective?

Congratulations! You've completed 'ADDIE in Action.' Remember: Every workplace challenge is an opportunity to investigate, plan, build, launch, and improve learning solutions. Keep this guide handy, and keep practicing—your next learning solution starts with a single question.

Question

01/05

A café manager notices that employees make order-entry mistakes during busy shifts. Which issue most clearly requires an operational change rather than a training solution?

- Employees would benefit from coaching on how to work faster at the register.
- New hires need more practice entering customer orders.
- Staff are still learning the menu items and order steps.
- The register buttons use unclear labels that confuse employees.

Question

02/05

A café introduces new order-entry training to reduce drink mistakes. Which reason best explains why evaluating the training is important after employees complete it?

- To collect positive reactions that demonstrate the training was successful overall.
- To show that employees attended the training and completed all assigned activities.
- To confirm whether the training improved performance and reveal what should be improved next.
- To document the training schedule and keep a record of when sessions were delivered.

Question

05/05

A supervisor wants to improve training for new café employees who need more practice entering customer orders. Which objective is the clearest and most measurable for that training need?

- New employees will understand how the register works during customer orders.
- New employees will watch order-entry demonstrations before their first shift.
- New employees will be familiar with café procedures for serving customers.
- Given five sample customer orders and a practice register, new employees will enter all five orders accurately.
